RE: Topographic Survey and Utility Location Project
City Of Noblesville
New White River Crossing Corridor from SR 37 to SR 32

TO: MSFLP Noblesville LLC
300 Wilmot Road
Deerfield , IL 60015

Dear Property Owner:

A route survey was completed by USI Consultants for the above referenced project in 2017. During preliminary investigations of this project alignment, the City of Noblesville has identified the need to supplement the 2017 survey by way of additional data collection in order to further investigate alignment alternatives and to minimize impacts to surrounding neighborhoods, historical and cultural resources, and sensitive environmental areas. We would like to inform you, through this letter, that field crews will be in your area to collect additional topographic survey and perform field investigation of historical, cultural, and environmental assets. This additional field work will help ensure the optimal transportation corridor connection while protecting our community's critical resources.

Our information shows that you own or occupy property near this proposed project. It may be necessary for the data collection crews to come onto your property to complete this work, which is allowed by law as stated in Indiana Code IC 25-21.5-9-7 and IC 25-21.5-9-8. After work is completed, any equipment necessary to complete the data collection efforts will be removed from your property and the land restored to its previous condition. The survey crews will have identification available and will produce it for your inspection before coming onto your property if so requested. If you have sold this property, or someone else occupies it, please let us know the name and address of the new owner or current occupant so we can contact them about this survey. The survey work will include mapping the location of features such as buildings, trees, fences, driveways, and obtaining ground elevations. This survey work is necessary for the proper planning and design of this project, and will be non-invasive and only required to obtain information or physical features of the area along the corridor. It will also provide the city more accurate information of features along the route which are presently not available within our electronic records.

At this stage, we generally do not expect any disruptions to your property other than project personnel entering your potentially entering your property to gather data. If we determine as project development proceeds that more extensive involvement of your property is required, we will contact you with additional information.

Please be assured that it is our sincere desire to minimize your inconvenience during this data collection effort. If any problems do occur, please contact me at 317-776-6330, or you can contact me by email at akrupski@noblesville.in.us. Thank you, in advance, for your understanding and cooperation.

Sincerely,
CITY OF NOBLESVILLE

RE: Topographic Survey and Utility Location Project
City Of Noblesville
New White River Crossing Corridor from SR 37 to SR 32

TO: 8224 Properties LLC
5500 W. Foxhill Ct.
Muncie, IN 47304

Dear Property Owner:

A route survey was completed by USI Consultants for the above referenced project in 2017. During preliminary investigations of this project alignment, the City of Noblesville has identified the need to supplement the 2017 survey by way of additional data collection in order to further investigate alignment alternatives and to minimize impacts to surrounding neighborhoods, historical and cultural resources, and sensitive environmental areas. We would like to inform you, through this letter, that field crews will be in your area to collect additional topographic survey and perform field investigation of historical, cultural, and environmental assets. This additional field work will help ensure the optimal transportation corridor connection while protecting our community's critical resources.

Our information shows that you own or occupy property near this proposed project. It may be necessary for the data collection crews to come onto your property to complete this work, which is allowed by law as stated in Indiana Code IC 25-21.5-9-7 and IC 25-21.5-9-8. After work is completed, any equipment necessary to complete the data collection efforts will be removed from your property and the land restored to its previous condition. The survey crews will have identification available and will produce it for your inspection before coming onto your property if so requested. If you have sold this property, or someone else occupies it, please let us know the name and address of the new owner or current occupant so we can contact them about this survey. The survey work will include mapping the location of features such as buildings, trees, fences, driveways, and obtaining ground elevations. This survey work is necessary for the proper planning and design of this project, and will be non-invasive and only required to obtain information or physical features of the area along the corridor. It will also provide the city more accurate information of features along the route which are presently not available within our electronic records.

At this stage, we generally do not expect any disruptions to your property other than project personnel entering your potentially entering your property to gather data. If we determine as project development proceeds that more extensive involvement of your property is required, we will contact you with additional information.

Please be assured that it is our sincere desire to minimize your inconvenience during this data collection effort. If any problems do occur, please contact me at 317-776-6330, or you can contact me by email at akrupski@noblesville.in.us. Thank you, in advance, for your understanding and cooperation.

Sincerely,
CITY OF NOBLESVILLE

RE: Topographic Survey and Utility Location Project
City Of Noblesville
New White River Crossing Corridor from SR 37 to SR 32

TO: Annette Davis
PO Box 595
Noblesville, IN 46061-0595

Dear Property Owner:

A route survey was completed by USI Consultants for the above referenced project in 2017. During preliminary investigations of this project alignment, the City of Noblesville has identified the need to supplement the 2017 survey by way of additional data collection in order to further investigate alignment alternatives and to minimize impacts to surrounding neighborhoods, historical and cultural resources, and sensitive environmental areas. We would like to inform you, through this letter, that field crews will be in your area to collect additional topographic survey and perform field investigation of historical, cultural, and environmental assets. This additional field work will help ensure the optimal transportation corridor connection while protecting our community's critical resources.

Our information shows that you own or occupy property near this proposed project. It may be necessary for the data collection crews to come onto your property to complete this work, which is allowed by law as stated in Indiana Code IC 25-21.5-9-7 and IC 25-21.5-9-8. After work is completed, any equipment necessary to complete the data collection efforts will be removed from your property and the land restored to its previous condition. The survey crews will have identification available and will produce it for your inspection before coming onto your property if so requested. If you have sold this property, or someone else occupies it, please let us know the name and address of the new owner or current occupant so we can contact them about this survey. The survey work will include mapping the location of features such as buildings, trees, fences, driveways, and obtaining ground elevations. This survey work is necessary for the proper planning and design of this project, and will be non-invasive and only required to obtain information or physical features of the area along the corridor. It will also provide the city more accurate information of features along the route which are presently not available within our electronic records.

At this stage, we generally do not expect any disruptions to your property other than project personnel entering your potentially entering your property to gather data. If we determine as project development proceeds that more extensive involvement of your property is required, we will contact you with additional information.

Please be assured that it is our sincere desire to minimize your inconvenience during this data collection effort. If any problems do occur, please contact me at 317-776-6330, or you can contact me by email at akrupski@noblesville.in.us. Thank you, in advance, for your understanding and cooperation.

Sincerely,
CITY OF NOBLESVILLE

RE: Topographic Survey and Utility Location Project
City Of Noblesville
New White River Crossing Corridor from SR 37 to SR 32

TO: Robert & Melissa Bolden
764 S. 8th Street
Noblesville, IN 46060

Dear Property Owner:

A route survey was completed by USI Consultants for the above referenced project in 2017. During preliminary investigations of this project alignment, the City of Noblesville has identified the need to supplement the 2017 survey by way of additional data collection in order to further investigate alignment alternatives and to minimize impacts to surrounding neighborhoods, historical and cultural resources, and sensitive environmental areas. We would like to inform you, through this letter, that field crews will be in your area to collect additional topographic survey and perform field investigation of historical, cultural, and environmental assets. This additional field work will help ensure the optimal transportation corridor connection while protecting our community's critical resources.

Our information shows that you own or occupy property near this proposed project. It may be necessary for the data collection crews to come onto your property to complete this work, which is allowed by law as stated in Indiana Code IC 25-21.5-9-7 and IC 25-21.5-9-8. After work is completed, any equipment necessary to complete the data collection efforts will be removed from your property and the land restored to its previous condition. The survey crews will have identification available and will produce it for your inspection before coming onto your property if so requested. If you have sold this property, or someone else occupies it, please let us know the name and address of the new owner or current occupant so we can contact them about this survey. The survey work will include mapping the location of features such as buildings, trees, fences, driveways, and obtaining ground elevations. This survey work is necessary for the proper planning and design of this project, and will be non-invasive and only required to obtain information or physical features of the area along the corridor. It will also provide the city more accurate information of features along the route which are presently not available within our electronic records.

At this stage, we generally do not expect any disruptions to your property other than project personnel entering your potentially entering your property to gather data. If we determine as project development proceeds that more extensive involvement of your property is required, we will contact you with additional information.

Please be assured that it is our sincere desire to minimize your inconvenience during this data collection effort. If any problems do occur, please contact me at 317-776-6330, or you can contact me by email at akrupski@noblesville.in.us. Thank you, in advance, for your understanding and cooperation.

Sincerely,
CITY OF NOBLESVILLE

RE: Topographic Survey and Utility Location Project
City Of Noblesville
New White River Crossing Corridor from SR 37 to SR 32

TO: Remark Properties LLC
1215 Spruce Drive
Carmel, IN 46033

Dear Property Owner:

A route survey was completed by USI Consultants for the above referenced project in 2017. During preliminary investigations of this project alignment, the City of Noblesville has identified the need to supplement the 2017 survey by way of additional data collection in order to further investigate alignment alternatives and to minimize impacts to surrounding neighborhoods, historical and cultural resources, and sensitive environmental areas. We would like to inform you, through this letter, that field crews will be in your area to collect additional topographic survey and perform field investigation of historical, cultural, and environmental assets. This additional field work will help ensure the optimal transportation corridor connection while protecting our community's critical resources.

Our information shows that you own or occupy property near this proposed project. It may be necessary for the data collection crews to come onto your property to complete this work, which is allowed by law as stated in Indiana Code IC 25-21.5-9-7 and IC 25-21.5-9-8. After work is completed, any equipment necessary to complete the data collection efforts will be removed from your property and the land restored to its previous condition. The survey crews will have identification available and will produce it for your inspection before coming onto your property if so requested. If you have sold this property, or someone else occupies it, please let us know the name and address of the new owner or current occupant so we can contact them about this survey. The survey work will include mapping the location of features such as buildings, trees, fences, driveways, and obtaining ground elevations. This survey work is necessary for the proper planning and design of this project, and will be non-invasive and only required to obtain information or physical features of the area along the corridor. It will also provide the city more accurate information of features along the route which are presently not available within our electronic records.

At this stage, we generally do not expect any disruptions to your property other than project personnel entering your potentially entering your property to gather data. If we determine as project development proceeds that more extensive involvement of your property is required, we will contact you with additional information.

Please be assured that it is our sincere desire to minimize your inconvenience during this data collection effort. If any problems do occur, please contact me at 317-776-6330, or you can contact me by email at akrupski@noblesville.in.us. Thank you, in advance, for your understanding and cooperation.

Sincerely,
CITY OF NOBLESVILLE

RE: Topographic Survey and Utility Location Project
City Of Noblesville
New White River Crossing Corridor from SR 37 to SR 32

TO: James & Elisa DeFoe
211 E. Main Street PO Box 183
Arcadia, IN 46030

Dear Property Owner:

A route survey was completed by USI Consultants for the above referenced project in 2017. During preliminary investigations of this project alignment, the City of Noblesville has identified the need to supplement the 2017 survey by way of additional data collection in order to further investigate alignment alternatives and to minimize impacts to surrounding neighborhoods, historical and cultural resources, and sensitive environmental areas. We would like to inform you, through this letter, that field crews will be in your area to collect additional topographic survey and perform field investigation of historical, cultural, and environmental assets. This additional field work will help ensure the optimal transportation corridor connection while protecting our community's critical resources.

Our information shows that you own or occupy property near this proposed project. It may be necessary for the data collection crews to come onto your property to complete this work, which is allowed by law as stated in Indiana Code IC 25-21.5-9-7 and IC 25-21.5-9-8. After work is completed, any equipment necessary to complete the data collection efforts will be removed from your property and the land restored to its previous condition. The survey crews will have identification available and will produce it for your inspection before coming onto your property if so requested. If you have sold this property, or someone else occupies it, please let us know the name and address of the new owner or current occupant so we can contact them about this survey. The survey work will include mapping the location of features such as buildings, trees, fences, driveways, and obtaining ground elevations. This survey work is necessary for the proper planning and design of this project, and will be non-invasive and only required to obtain information or physical features of the area along the corridor. It will also provide the city more accurate information of features along the route which are presently not available within our electronic records.

At this stage, we generally do not expect any disruptions to your property other than project personnel entering your potentially entering your property to gather data. If we determine as project development proceeds that more extensive involvement of your property is required, we will contact you with additional information.

Please be assured that it is our sincere desire to minimize your inconvenience during this data collection effort. If any problems do occur, please contact me at 317-776-6330, or you can contact me by email at akrupski@noblesville.in.us. Thank you, in advance, for your understanding and cooperation.

Sincerely,
CITY OF NOBLESVILLE

RE: Topographic Survey and Utility Location Project
City Of Noblesville
New White River Crossing Corridor from SR 37 to SR 32

TO: Derick & Rene Hancock
17436 Trailview Circle
Noblesville, IN 46062

Dear Property Owner:

A route survey was completed by USI Consultants for the above referenced project in 2017. During preliminary investigations of this project alignment, the City of Noblesville has identified the need to supplement the 2017 survey by way of additional data collection in order to further investigate alignment alternatives and to minimize impacts to surrounding neighborhoods, historical and cultural resources, and sensitive environmental areas. We would like to inform you, through this letter, that field crews will be in your area to collect additional topographic survey and perform field investigation of historical, cultural, and environmental assets. This additional field work will help ensure the optimal transportation corridor connection while protecting our community's critical resources.

Our information shows that you own or occupy property near this proposed project. It may be necessary for the data collection crews to come onto your property to complete this work, which is allowed by law as stated in Indiana Code IC 25-21.5-9-7 and IC 25-21.5-9-8. After work is completed, any equipment necessary to complete the data collection efforts will be removed from your property and the land restored to its previous condition. The survey crews will have identification available and will produce it for your inspection before coming onto your property if so requested. If you have sold this property, or someone else occupies it, please let us know the name and address of the new owner or current occupant so we can contact them about this survey. The survey work will include mapping the location of features such as buildings, trees, fences, driveways, and obtaining ground elevations. This survey work is necessary for the proper planning and design of this project, and will be non-invasive and only required to obtain information or physical features of the area along the corridor. It will also provide the city more accurate information of features along the route which are presently not available within our electronic records.

At this stage, we generally do not expect any disruptions to your property other than project personnel entering your potentially entering your property to gather data. If we determine as project development proceeds that more extensive involvement of your property is required, we will contact you with additional information.

Please be assured that it is our sincere desire to minimize your inconvenience during this data collection effort. If any problems do occur, please contact me at 317-776-6330, or you can contact me by email at akrupski@noblesville.in.us. Thank you, in advance, for your understanding and cooperation.

Sincerely,
CITY OF NOBLESVILLE

Noblesville, IN 46062

Dear Property Owner:

A route survey was completed by USI Consultants for the above referenced project in 2017. During preliminary investigations of this project alignment, the City of Noblesville has identified the need to supplement the 2017 survey by way of additional data collection in order to further investigate alignment alternatives and to minimize impacts to surrounding neighborhoods, historical and cultural resources, and sensitive environmental areas. We would like to inform you, through this letter, that field crews will be in your area to collect additional topographic survey and perform field investigation of historical, cultural, and environmental assets. This additional field work will help ensure the optimal transportation corridor connection while protecting our community's critical resources.

Our information shows that you own or occupy property near this proposed project. It may be necessary for the data collection crews to come onto your property to complete this work, which is allowed by law as stated in Indiana Code IC 25-21.5-9-7 and IC 25-21.5-9-8. After work is completed, any equipment necessary to complete the data collection efforts will be removed from your property and the land restored to its previous condition. The survey crews will have identification available and will produce it for your inspection before coming onto your property if so requested. If you have sold this property, or someone else occupies it, please let us know the name and address of the new owner or current occupant so we can contact them about this survey. The survey work will include mapping the location of features such as buildings, trees, fences, driveways, and obtaining ground elevations. This survey work is necessary for the proper planning and design of this project, and will be non-invasive and only required to obtain information or physical features of the area along the corridor. It will also provide the city more accurate information of features along the route which are presently not available within our electronic records.

At this stage, we generally do not expect any disruptions to your property other than project personnel entering your potentially entering your property to gather data. If we determine as project development proceeds that more extensive involvement of your property is required, we will contact you with additional information.

Please be assured that it is our sincere desire to minimize your inconvenience during this data collection effort. If any problems do occur, please contact me at 317-776-6330, or you can contact me by email at akrupski@noblesville.in.us. Thank you, in advance, for your understanding and cooperation.

Sincerely,
CITY OF NOBLESVILLE

Noblesville, IN 46062

Dear Property Owner:

A route survey was completed by USI Consultants for the above referenced project in 2017. During preliminary investigations of this project alignment, the City of Noblesville has identified the need to supplement the 2017 survey by way of additional data collection in order to further investigate alignment alternatives and to minimize impacts to surrounding neighborhoods, historical and cultural resources, and sensitive environmental areas. We would like to inform you, through this letter, that field crews will be in your area to collect additional topographic survey and perform field investigation of historical, cultural, and environmental assets. This additional field work will help ensure the optimal transportation corridor connection while protecting our community's critical resources.

Our information shows that you own or occupy property near this proposed project. It may be necessary for the data collection crews to come onto your property to complete this work, which is allowed by law as stated in Indiana Code IC 25-21.5-9-7 and IC 25-21.5-9-8. After work is completed, any equipment necessary to complete the data collection efforts will be removed from your property and the land restored to its previous condition. The survey crews will have identification available and will produce it for your inspection before coming onto your property if so requested. If you have sold this property, or someone else occupies it, please let us know the name and address of the new owner or current occupant so we can contact them about this survey. The survey work will include mapping the location of features such as buildings, trees, fences, driveways, and obtaining ground elevations. This survey work is necessary for the proper planning and design of this project, and will be non-invasive and only required to obtain information or physical features of the area along the corridor. It will also provide the city more accurate information of features along the route which are presently not available within our electronic records.

At this stage, we generally do not expect any disruptions to your property other than project personnel entering your potentially entering your property to gather data. If we determine as project development proceeds that more extensive involvement of your property is required, we will contact you with additional information.

Please be assured that it is our sincere desire to minimize your inconvenience during this data collection effort. If any problems do occur, please contact me at 317-776-6330, or you can contact me by email at akrupski@noblesville.in.us. Thank you, in advance, for your understanding and cooperation.

Sincerely,
CITY OF NOBLESVILLE

Dear Property Owner:

A route survey was completed by USI Consultants for the above referenced project in 2017. During preliminary investigations of this project alignment, the City of Noblesville has identified the need to supplement the 2017 survey by way of additional data collection in order to further investigate alignment alternatives and to minimize impacts to surrounding neighborhoods, historical and cultural resources, and sensitive environmental areas. We would like to inform you, through this letter, that field crews will be in your area to collect additional topographic survey and perform field investigation of historical, cultural, and environmental assets. This additional field work will help ensure the optimal transportation corridor connection while protecting our community's critical resources.

Our information shows that you own or occupy property near this proposed project. It may be necessary for the data collection crews to come onto your property to complete this work, which is allowed by law as stated in Indiana Code IC 25-21.5-9-7 and IC 25-21.5-9-8. After work is completed, any equipment necessary to complete the data collection efforts will be removed from your property and the land restored to its previous condition. The survey crews will have identification available and will produce it for your inspection before coming onto your property if so requested. If you have sold this property, or someone else occupies it, please let us know the name and address of the new owner or current occupant so we can contact them about this survey. The survey work will include mapping the location of features such as buildings, trees, fences, driveways, and obtaining ground elevations. This survey work is necessary for the proper planning and design of this project, and will be non-invasive and only required to obtain information or physical features of the area along the corridor. It will also provide the city more accurate information of features along the route which are presently not available within our electronic records.

At this stage, we generally do not expect any disruptions to your property other than project personnel entering your potentially entering your property to gather data. If we determine as project development proceeds that more extensive involvement of your property is required, we will contact you with additional information.

Please be assured that it is our sincere desire to minimize your inconvenience during this data collection effort. If any problems do occur, please contact me at 317-776-6330, or you can contact me by email at akrupski@noblesville.in.us. Thank you, in advance, for your understanding and cooperation.

Sincerely,
CITY OF NOBLESVILLE

TO: Tree House Ventures LLC
PO Box 685
Noblesville, IN 46061

Dear Property Owner:

A route survey was completed by USI Consultants for the above referenced project in 2017. During preliminary investigations of this project alignment, the City of Noblesville has identified the need to supplement the 2017 survey by way of additional data collection in order to further investigate alignment alternatives and to minimize impacts to surrounding neighborhoods, historical and cultural resources, and sensitive environmental areas. We would like to inform you, through this letter, that field crews will be in your area to collect additional topographic survey and perform field investigation of historical, cultural, and environmental assets. This additional field work will help ensure the optimal transportation corridor connection while protecting our community's critical resources.

Our information shows that you own or occupy property near this proposed project. It may be necessary for the data collection crews to come onto your property to complete this work, which is allowed by law as stated in Indiana Code IC 25-21.5-9-7 and IC 25-21.5-9-8. After work is completed, any equipment necessary to complete the data collection efforts will be removed from your property and the land restored to its previous condition. The survey crews will have identification available and will produce it for your inspection before coming onto your property if so requested. If you have sold this property, or someone else occupies it, please let us know the name and address of the new owner or current occupant so we can contact them about this survey. The survey work will include mapping the location of features such as buildings, trees, fences, driveways, and obtaining ground elevations. This survey work is necessary for the proper planning and design of this project, and will be non-invasive and only required to obtain information or physical features of the area along the corridor. It will also provide the city more accurate information of features along the route which are presently not available within our electronic records.

At this stage, we generally do not expect any disruptions to your property other than project personnel entering your potentially entering your property to gather data. If we determine as project development proceeds that more extensive involvement of your property is required, we will contact you with additional information.

Please be assured that it is our sincere desire to minimize your inconvenience during this data collection effort. If any problems do occur, please contact me at 317-776-6330, or you can contact me by email at akrupski@noblesville.in.us. Thank you, in advance, for your understanding and cooperation.

Sincerely,
CITY OF NOBLESVILLE

RE: Topographic Survey and Utility Location Project
City Of Noblesville
New White River Crossing Corridor from SR 37 to SR 32

TO: Dahike & Hiday Automotive Specialists, Inc.
1337 Pleasant Street
Noblesville, IN 46060

Dear Property Owner:

A route survey was completed by USI Consultants for the above referenced project in 2017. During preliminary investigations of this project alignment, the City of Noblesville has identified the need to supplement the 2017 survey by way of additional data collection in order to further investigate alignment alternatives and to minimize impacts to surrounding neighborhoods, historical and cultural resources, and sensitive environmental areas. We would like to inform you, through this letter, that field crews will be in your area to collect additional topographic survey and perform field investigation of historical, cultural, and environmental assets. This additional field work will help ensure the optimal transportation corridor connection while protecting our community's critical resources.

Our information shows that you own or occupy property near this proposed project. It may be necessary for the data collection crews to come onto your property to complete this work, which is allowed by law as stated in Indiana Code IC 25-21.5-9-7 and IC 25-21.5-9-8. After work is completed, any equipment necessary to complete the data collection efforts will be removed from your property and the land restored to its previous condition. The survey crews will have identification available and will produce it for your inspection before coming onto your property if so requested. If you have sold this property, or someone else occupies it, please let us know the name and address of the new owner or current occupant so we can contact them about this survey. The survey work will include mapping the location of features such as buildings, trees, fences, driveways, and obtaining ground elevations. This survey work is necessary for the proper planning and design of this project, and will be non-invasive and only required to obtain information or physical features of the area along the corridor. It will also provide the city more accurate information of features along the route which are presently not available within our electronic records.

At this stage, we generally do not expect any disruptions to your property other than project personnel entering your potentially entering your property to gather data. If we determine as project development proceeds that more extensive involvement of your property is required, we will contact you with additional information.

Please be assured that it is our sincere desire to minimize your inconvenience during this data collection effort. If any problems do occur, please contact me at 317-776-6330, or you can contact me by email at akrupski@noblesville.in.us. Thank you, in advance, for your understanding and cooperation.

Sincerely,
CITY OF NOBLESVILLE
